

Anyone Can Be Diagnosed With Breast Cancer

*Nancy L. Elliott, MD, FACS, Breast Surgeon,
Founder and Director-Montclair Breast Center*

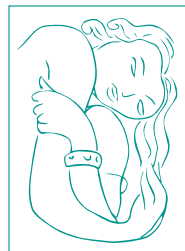

I've treated thousands of women for breast cancer but that doesn't mean I am immune. I know that. Yet, who can really be prepared for breast cancer?

But I was fortunate; I had planned ahead. I know the importance of early detection. I am aware that women have a one in eight chance of being diagnosed with breast cancer. So when the calcifications turned up during my routine annual mammogram, I was concerned but not surprised.

Considering the big picture, my experience was a very positive one. The calcifications on my mammogram turned out to be the earliest stage of breast cancer: Stage 0. My diagnosis and treatment were relatively easy. My entire treatment was accomplished in our very own center! I was so thankful for, and confident in, the expert team of professionals that I had put together. What a twist of fate to have needed them for myself!

I underwent a stereotactic biopsy, a breast MRI, and then a lumpectomy. Now, I am taking tamoxifen, and

feeling fine. I wish every woman's experience with breast cancer could be as easy as mine. My sincere advice is: plan ahead. Don't put off getting your yearly screening mammogram by a breast imaging specialist.

Montclair Breast Center
