

MEET THE BREAST TEAM

Who is Reading Your Mammogram?

Each year an additional 45,000 women in the U.S. who have had mammograms are walking around with breast cancer and don't know it.

Radiologists who specialize in reading breast images find twice as many breast cancers as general radiologists.* Our nationally recognized, dedicated team of breast imagers and breast surgeons use the most sophisticated technologies and are committed to providing better breast care than anywhere. Montclair Breast Center has earned the reputation as a premier, multidisciplinary breast center, which specializes in proactive breast healthcare, risk-reduction techniques and the early detection and treatment of breast cancer. Forty percent of our patients newly diagnosed with breast cancer are stage zero! Additionally, fifty-two percent are stage I. This means that for a woman who comes to Montclair Breast Center for regular examinations, the chances are ninety-two percent that her breast cancer will be caught at stage zero or stage I. Personal attention and a holistic approach bring you the peace of mind that comes from knowing your doctors are uncompromising when it comes to the quality of your care.**
